

Coed Talylan Land Trust

Membership Agreement

This is an agreement between Coed Talylan Land Trust (no.7866) (the Society) whose registered office is Coed Talylan, Bethlehem, Llangadog, SA19 9DR the Member of the Society.

The Society agrees to uphold the Member's rights:

- to share in the benefits that the Society provides.
- to participate in and benefit from the activities of the Society.
- to be provided with educational and training opportunities in the skills and techniques that further the purpose of the Society.
- to have full access to all information and records regarding the activities of the Society, and its constituent working groups and elected roles.

The Member agrees:

- to uphold the values and principles of the Membership Agreement
- to further the purpose of the Society.
- to follow the rules of the Society as proscribed by the Society's Rules, the secondary rules, and all other relevant policies and governance structures.

Purpose

To hold the land known as Coed Talylan in trust for the benefit, health and well-being of the communities that are dependent on, or care for the land, both human and non-human, and steward the development of the land according our shared values and principles.

Values and Principles

Land

Land is not merely a commodity. The land is a resource to be shared equitably between all communities that depend on it economically and ecologically.

We practice methods of land stewardship based on the principles of Agroecology and apply these principles when making decisions about developing and managing the land we use.

The principles of agroecology we adhere to are as follows:

Recycle Nutrients: Enhance recycling of biomass and optimising nutrient availability and balancing nutrient flow.

Build Soil: Securing favourable soil conditions for plant growth, particularly by managing organic matter and enhancing soil biotic activity.

Minimise Losses from a System: Minimising losses due to flows of solar radiation, air and water by way of microclimate management, water harvesting and soil management through increased soil cover.

Optimise Genetic Diversity: Optimise species and genetic diversification of the agroecosystem in time and space.

Enhance Biological Interactions: Enhance beneficial biological interactions and synergisms among agrobiodiversity components thus resulting in the promotion of key ecological processes and services.

Community

We create a vibrant and dynamic community through a co-sufficient mutually supportive economy.

The co-sufficient interdependence of living in a community is the most resilient way to build a Home.

Open and honest communication is the basis for trust.

We have respect for each other and the environment we create together.

We will not tolerate any behaviour, either physical or verbal, that demeans, marginalises or dominates others.

We are aware of the plurality of ethnic and cultural identities that people may identify with, and avoid making

generalisations or assumptions about people.

We appreciate that conflict may arise but through resolution we grow stronger as a community. In light of this **we are committed to a Conflict Resolution Process.**

Home

The design and construction of Homes at Coed Talyfan will use integrated and regenerative economic systems based upon the principles of Agroecology and Food Sovereignty.

The Homes will be free from economic systems that are exploitative, degenerative or oppressive.

The Homes actively contribute to the regeneration, health and wellbeing of the surrounding ecology.

Food

When making decisions and choices about the food we produce, eat and share we will consider the following Principles of Food Sovereignty:

Focuses on food for people: The right to food which is healthy, culturally and regionally appropriate is the basic legal demand underpinning food sovereignty. Guaranteeing it requires policies and agreements which support diversified local food production in every region and respects the fact that access to healthy food is necessary for our sense of security. Food is not simply another commodity to be traded or speculated on for profit it is a basic human need and equal access to the means to meet this need is fundamental for a healthy community.

Values food providers: Many smallholder farmers are marginalised and people are often discouraged from the possibility of land based livelihoods by central government and agribusiness. Food sovereignty asserts agricultural workers' and food providers' right to live and work in dignity free from exploitation.

Localises food systems: Food must be seen primarily as sustenance for the community and only secondarily as something to be traded. Under food sovereignty, local and regional provision takes precedence over supplying distant markets and export-orientated agriculture.

Puts control locally: Food sovereignty places control over local resources in the hands of those that use them to be used and shared in socially and environmentally sustainable ways which conserve diversity. Such resources should not be privatised but model of shared use and ownership should be developed from the ground up.

Builds knowledge and skills: Technologies that undermine food providers' ability to develop and pass on knowledge and skills needed for localised food systems are rejected. Instead, food sovereignty calls for appropriate technology, education and research systems to support the development of agricultural knowledge and skills.

Work with nature: Food sovereignty requires production and distribution systems that protect natural resources and reduce greenhouse gas emissions, avoiding energy-intensive industrial methods that damage the environment and the health of those that inhabit it.

Health

We share a desire to achieve a healthy and fulfilling life dwelling in harmony with our surrounding ecology with reverence and gratitude.

Our individual health is reflective of the health of the community we are a part of, whilst the health of the community is in turn dependent upon both the health of the soil, and the strength of the relationships within it.

Living in accordance with the principles of Food Sovereignty and Agroecology will restore and maintain our health and the health of the communities to which we belong.

Technology

We are committed to designing, using, promoting and stewarding appropriate technology.

We understand appropriate technology as a tool or technique that is conducive to freedom and conviviality.

The acquisition and implementation of any given technology must also be in accordance with the values and principles of this agreement.

Energy

We endeavour to preserve, capture and store sources of energy where ever possible.

We are working towards the reduction, over time, of our dependence on non-renewable energy sources to a practical minimum. To this end, any use of fossil fuels will be monitored, quantified and evaluated.

Materials

We minimise waste and ensure that we recycle and re-use waste materials in other productive systems.

We reject the use of goods and materials that are produced through exploitative and unsustainable economic systems.

We prioritise the use of locally and regionally sourced materials.
